

IN THE SPECIFICATION

On page 11, please amend the paragraph beginning at line 1 as follows:

B1 --Compare this with bi-directional paths, along which the focus may pass reversibly. For example, starting with the focus at the fourth region 5d in the bottom left-hand corner, pressing the right arrow key 4c moves the focus to the fifth region 5e in the bottom right-hand corner. Pressing the left arrow key 4d results in the focus passing back to the fourth region [[5e]] 5d. This is a reversible path 8a.--

On page 12, please amend the paragraph beginning at line 13 as follows:

B2 --Referring to Figures 6 and 7, the hypertext links 13a', 13b', 13c', 13d', 13e' are associated with functional display regions comprising irregularly disposed logical regions 13a, 13b, 13c, 13d, 13e. These logical regions 13a, 13b, 13c, 13d, 13e are created by the web-browser. The regions 13a, 13b, 13c, 13d, 13e are based on the encapsulated area of the link 13a', 13b', 13c', 13d', 13e', as defined by, for instance, the boundaries of an image or of a single text line. The regions 13a, 13b, 13c, 13d, 13e are expanded by 1/50th of the visible display in each direction. It will be appreciated that the regions 13a, 13b, 13c, 13d, 13e may be shrunk or not expanded at all. Furthermore, the borders of the regions 13a, 13b, 13c, 13d, 13e may be expanded independently of one another. Also, the regions 13a, 13b, 13c, 13d, 13e [[by]] may be expanded by a relative factor. For example the height of the region may be expanded by 1.5 times. The regions do not overlap and do not have to have a direct connection to the graphical representation. Several regions may be connected to the same link. For example, two regions 18a, 18b may be required to represent the same link 19 when a sentence wraps into a new line, as shown in Figure 7.--
